Clavister ManagementSeries

Clavister InControl SDK

Extend and integrate your administration with Clavister InControl Software Development Kit

FEATURES AT-A-GLANCE

- Easy to align network security with IT/IS processes
- Enable integration with back-end systems
- Comprehensive access to all Clavister InControl Server functions
- Easy to use SDK with code examples
- Based on Microsoft Windows Communication Foundation (WCF)

The Clavister InControl Software Development Kit (SDK) further extends the service integration ability of the Clavister InControl. The SDK consists of an Application Programming Interface (API), developer documentation and code examples, offering customers and third-party integrators an easy way of developing custom integrated solutions for Clavister InControl Server.

Integrated Security Management

IT security is fast becoming an integral part of overall IT infrastructure and many organizations are looking for ways to integrate security management and administration with back-office services, billing, accounting and provisioning systems. Clavister InControl SDK offers organizations and integrators the control and integration capabilities required to develop tailor-made solutions that conforms to the way organizations work.

Clavister InControl SDK presents endless opportunities for organizations and consultants to deliver tailored solution for optimized security management workflow. Below are some examples on what you can do with Clavister InControl SDK.

Example Solutions

There are a number of interesting solutions that can be accomplished with Clavister InControl SDK. Below are some examples.

Provisioning

One example of a custom solution could be a Managed Security Service Providers (MSSP) organization developing a custom solution to align provisioning and operations of security services with their business processes.

Billing and Accounting

Another example could be an organization developing a custom solution that connects their back-office services to perform billing and accounting for their customers.

External Monitoring

A third example could be a solution to provide remote monitoring of a large number of Clavister Security Gateways with including the ability to stop and restart selected security gateways.

The capabilities of Clavister InControl SDK are virtually limitless; it is possible to perform all aspects that are currently supported with the Clavister InControl client that is included in Clavister InControl.

Runtime Overview

A Clavister InControl client developed using the Clavister InControl API communicates with the Clavister InControl Server just as the standard Clavister InControl client supplied with your Clavister InControl installation.

InControl Server
Integrators and Developers

Clavister InControl SDK is based on Microsoft Windows Communication Foundation protocol (WCF) enabling developers to implement innovative solutions. For more information about WCF, please visit **www.microsoft.com** for more information.

For detailed information and programming examples, please see the Clavister InControl SDK Guide available from **www.clavister.com**.

Installation

Clavister InControl SDK comes pre-installed with the Clavister InControl Server version 1.10.01 or higher. To access the Clavister InControl SDK functionality, you will need a license that enables the use of the API. Please contact your local Clavister Sales Representative for more information.
