

Manage all your Clavister NetWall firewalls centrally

Clavister InControl is our premium centralized management system, built to handle thousands of Clavister NetWall Firewalls in large networks. Built-in AAA (Authentication, Authorization and Accounting) functionality alongside delegated management provides a secure, multi-user environment with multi-tenancy support.

With integrated support for reporting, version control, zero touch provisioning, shared policies and real-time monitoring, Clavister InControl's centralized management system makes for the ideal solution for large enterprises and service providers.

Challenges we solve

Centralized Management for large installations

Clavister InControl offers a comprehensive centralized management solution that will assist and help administrators perform their daily tasks faster, easier and in a more streamlined way. With support for triple-AAA (Authentication, Authorization and Audit) the integrity and configurations managed by the Clavister InControl system are kept under strict control. This level of control makes it easy to use delegated management, allowing specific teams and personnel to access only designated parts of the system.

Clavister InControl Architecture

The Clavister InControl centralized management solution is built on a modern, robust and scalable client/server architecture. It is a unified solution for all Clavister NetWall products, regardless if they are hardware or virtual appliances. It works the same way across all Clavister NetWall products.

The Clavister InControl solution consists of the Clavister InControl Server and one or more Clavister InControl Clients. It is capable of servicing a large number of concurrent administrators and several thousand Clavister NetWall. This solution also includes the comprehensive Clavister InControl Logging Agent (ILA), which can reside alongside the Clavister InControl Server or on standalone hosts depending on traffic load or preference.

Clavister InControl Server

The Clavister InControl Server is extremely robust and is capable of servicing a large number of administrators and configured devices. Built for scalability and flexibility, the Clavister InControl Server is responsible for all communication between the Clavister InControl Clients and the Clavister ILA, as well as with all Clavister Security Gateways in the network.

Clavister InControl Client

The Clavister InControl Client is the graphical user interface which administrators use for everyday work and it offers a multitude of functionality and performance enhancements for administrators.

Clavister InControl Logging Agent

Included with Clavister InControl is a comprehensive logging solution comprised of Clavister InControl Logging Agent (ILA). The log forensics in Clavister InControl Client offers advanced search, sort and filtering functionality, which makes it easy for any administrator to find exactly what they are looking for. It is also possible to run the log forensics in real-time mode; a feature which comes in handy when troubleshooting network traffic.
