Clavister NetWall Training Courses

Become A NetWall Expert

At the heart of every NetWall product is our cOS Core, Clavister's proprietary software engine that drives and controls our range of next-generation firewalls. This robust core is the foundation upon which our comprehensive NetWall solutions are built.

To help you master the full potential of our NetWall products, Clavister offers a comprehensive Expert Training Path. This path has been carefully designed to support you in becoming a NetWall expert. It consists of four comprehensive courses, each tailored to build on your knowledge and skills:

Clavister NetWall Fundamentals

Clavister NetWall Building Corporate Networks

Clavister NetWall VPN

Clavister NetWall Routing

Clavister Netwall Fundamentals

The Clavister NetWall Fundamentals course is an introductory training programme designed for people who are new to Clavister products. It's suitable for beginners and technicians familiar with other vendors. The course provides a hands-on, scenario-based introduction to firewall administration, security, and network management systems. It's the first step towards becoming a NetWall expert.

Benefits for IT Specialists and Clavister Partners
The course is particularly beneficial for IT specialists responsible for network security and management. If you are a Clavister Partner, having certified employees can enhance your value as a security provider and improve your partnership level, leading to better deals.

Course Content and Learning Objectives
The course is flexible, allowing you to start whenever you're ready. You'll play the role of a network administrator for a small company facing a variety of challenges. The course provides you with tools for redundancy, traffic optimisation and inspection, and fine-grained control. These tools include security policies, application control, intrusion detection and prevention, log receivers and troubleshooting.

After completing the course, you'll have a good understanding of how to design, build, and administrate networks using Clavister products. You'll also have the option to take a certification exam to receive an official Clavister certificate.

Recommendation
To get the most out of the course, it's recommended to have knowledge in TCP/IP, routing, and firewall basics. A computer with good internet connectivity and two screens is ideal for following the online sessions.

Formats:
ILO+LAB online or onsite (duration 1 or 2 days)
Self-paced + LAB

Clavister VPN

The Clavister NetWall Virtual Private Networks (VPN) course is a hands-on, scenario-based training that covers the various VPN techniques available in every Clavister firewall. VPNs are a cost-effective way to securely connect people and organisations, and understanding the technologies involved is crucial for security.

Benefits for IT Specialists and Clavister Partners
This course is designed for IT specialists who are responsible for the security and management of networks, regardless of their size. If you're a Clavister Partner, having certified employees can enhance your value as a security provider, improve your partnership level, and lead to better deals.

Course Content and Learning Objectives
The course covers the basics of VPN technologies, such as IPsec and IKE, and guides you through different configuration methods. It also covers user authentication and various VPN scenarios, including hub-and-spoke VPN, full mesh VPN, roaming VPN, and SSL VPN featuring Clavister OneConnect.

After completing the course, you'll have a good understanding of how best to design, build, and administrate networks using Clavister products. This course is somewhat standalone and will help you solve challenges using VPN technologies.

Duration: 1 day
Formats: ILO+LAB online or onsite
Prerequisites: Clavister NetWall Fundamentals (recommended)
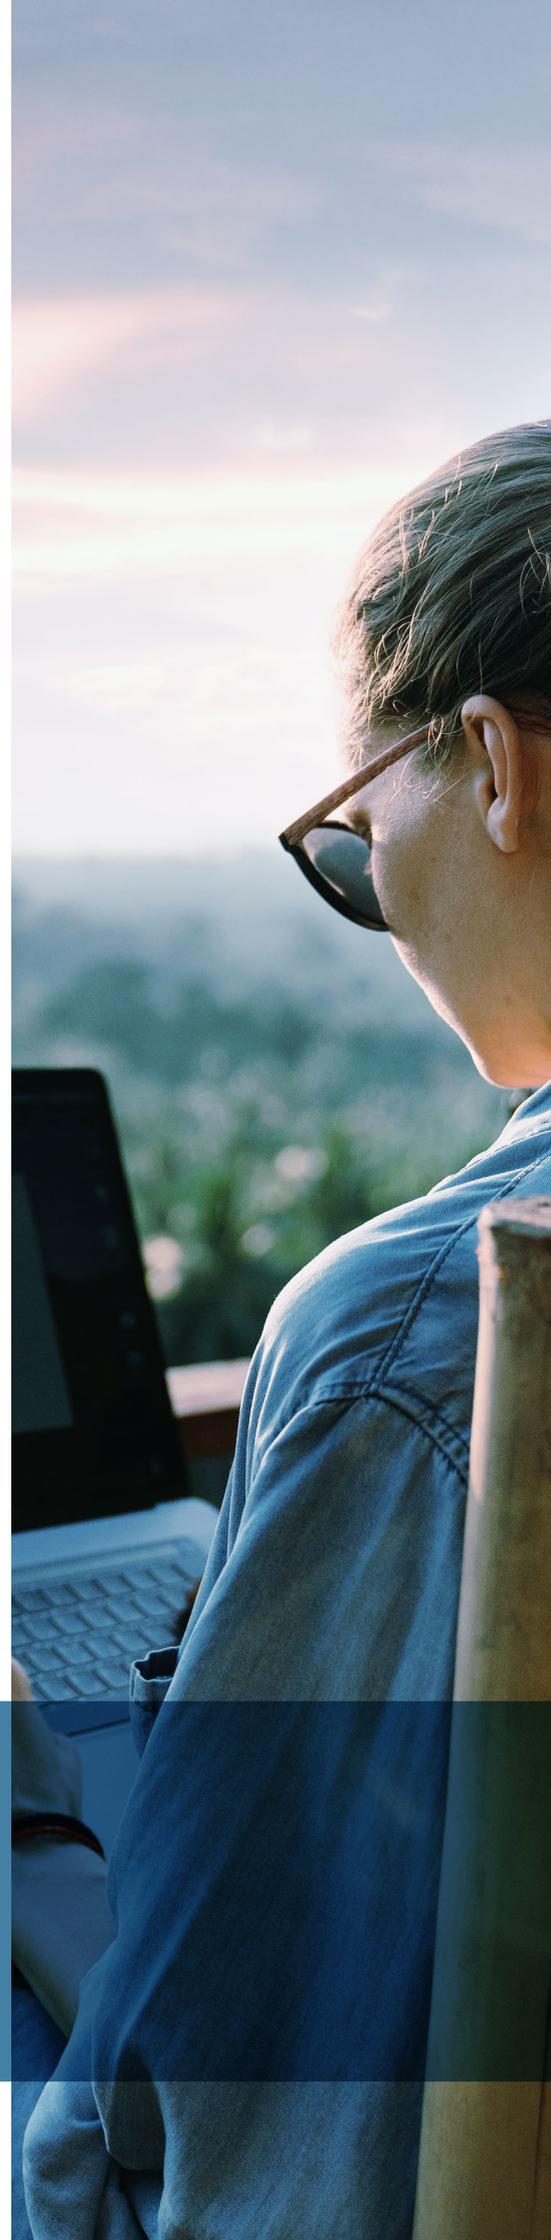

Clavister BCN

The Clavister NetWall Building Corporate Networks course is an advanced training programme that builds on the knowledge gained in the Clavister NetWall Fundamentals course. It focuses on transforming a small-scale setup into a corporate-grade solution that ensures business continuity.

Benefits for IT Specialists and Clavister Partners
This course is designed for IT specialists responsible for network security and management. If you're a Clavister Partner, having certified employees can enhance your value as a security provider, improve your partnership level, and lead to better deals.

Course Content and Learning Objectives
The course provides hands-on, scenario-based training that emphasises best practices for designing and configuring networks and security with availability, scalability, and reliability in mind. As a network administrator for a sizable corporation, you'll face more complex challenges. The course will equip you with tools for redundancy and load balancing, traffic optimisation, and fine-grained control. These tools include high availability, route failover, route load balancing, server load balancing, policy-based routing, VLANs, NAT pools, log receivers, REST APIs, and SNMP monitoring and traps.

After completing the course, you'll have a good understanding of how best to design, build, and administrate networks using Clavister products.

Duration: 1 day
Formats: ILO+LAB online or onsite
Prerequisites: Clavister NetWall Fundamentals (recommended)

Clavister Routing

The Clavister NetWall Routing course is a hands-on, scenario-based training that delves into routing techniques in depth. It starts with a refresher on the basics and progresses to cover complex mechanisms such as asymmetric, dynamic, virtual, and multicast routing, as well as how Clavister firewalls handle them. This course is considered the final step in achieving NetWall expertise.

Benefits for IT Specialists and Clavister Partners
The course is designed for IT specialists responsible for network security and management. If you're a Clavister Partner, having certified employees can enhance your value as a security provider, improve your partnership level, and lead to better deals.

Course Content
The course covers routing basics, static routing, policy-based routing, proxy ARP, OSPF, loopback interfaces, and switch routes. It also explores various routing scenarios, including virtual routing, dynamic routing, multicast routing, and transparency.

Summary
In summary, the Clavister NetWall Routing course is a comprehensive training programme that provides the necessary skills and knowledge to effectively manage and secure networks using advanced routing techniques in Clavister products. It's a valuable resource for IT professionals and Clavister Partners alike.
